

PMAG LightBurn Settings - Instruction Sheet

Thank you for your purchase!

At Holster Geek, we're laser-focused on customer satisfaction. If you experience any issues with your files, please don't hesitate to reach out. We'll do everything we can to make it right.

File Compatibility

- These files are for use with a galvo fiber laser running LightBurn software.
- These files are NOT compatible with EZ-CAD or CO2/diode lasers.
- Ensure you are running LightBurn with support for material library imports (.clb format).

Included in Your Download

- 1 LightBurn Material Library (.clb file)
- Setup instructions
- Tips for PMAG surface prep and post-etch cleaning
- Presets for the following lens sizes:
 - 70mm
 - 110mm
 - 175mm
 - 200mm
 - 210mm
 - 250mm
 - 300mm

Supported PMAG Types

- These settings are verified to work with Magpul PMAGs only.
- Other polymer magazines may use different materials and may not yield the same results.

Optimized Color Settings For:

- Black PMAGs
- Brown - Dark & Medium

- Gray - Dark & Light
- Tan - Dark, Medium & Light

Tips for Best Results

- Clean the PMAG surface with isopropyl alcohol before engraving.
- Avoid touching the engraving area after cleaning to prevent oils from affecting the results.
- After etching, gently wipe with a microfiber cloth to remove residue.
- If results appear off, confirm the correct lens file is loaded and your laser is properly focused.

Need Help?

If you have questions or need assistance with these files, feel free to message us directly through your order or email us at jessebazan2016@gmail.com.

We appreciate your support!
