

Hello, and thank you once again for your purchase!

I just want you to know that I'm only one message away if you need help — whether it's about the settings, configuration, or getting better results with your laser.

A few important things about your package:

- It includes **more material settings than listed** in the Etsy description — giving you a strong foundation for testing and production.
- Some packages also include **bonus presets for multiple lenses** (e.g., 110mm, 150mm, 175mm, etc.), so you can adapt quickly no matter your setup.
- I've also added a complete PDF guide:

The Fiber Laser Settings Bible

This guide explains each parameter in detail and can answer many of your laser-related questions.

If you have any questions, want to engrave something specific, or need help adjusting the settings for a certain material, just send me a message — I'm happy to assist step-by-step.

All the best,
Valentin
