

Hi, and thank you for downloading this settings pack!

Inside this folder, you'll find only the **older versions** of my laser settings.

I've decided to include them so you can have full access to all the work and testing I've done up to this point — no secrets, just transparency.

These versions were created during various development stages, and while they may not be as refined as the latest release, they're still useful for comparison or personal preference.

For the best results, I recommend using the latest version (v3), which has been fine-tuned to offer the perfect balance of speed, power, and engraving quality.

If you have any questions, I'm just a message away — always happy to help!

All the best,

Valentin
